iii) Testing the created model using the API created for the deployed model:

```
!support requests

# NOTE: you must manually set API_KEY below using information retrieved from your IBM Cloud account.
API_KEY = "your-api-key"
token_response = requests.post('https://iam.cloud.ibm.com/identity/token', data={"apikey":
    API_KEY, "grant_type": 'urn:ibm:params:oauth:grant-type:apikey'})
accessToken = token_response.json()["access_token"]

header = {'content-type': 'application/json', 'authorization': 'bearer ' + accessToken}

# NOTE: manually define and pass the array(s) of values to be scored in the next line
payload_scoring = [{"input_data": [{"field": ["bmi score", "tdee score", "university rating", "sop", "cost", "cpu", "research"]}, {"values": [[120, 150, 3, 3.5, 4, 9.25, 1]]}]]

response_scoring = requests.post('https://us-south.ml.cloud.ibm.com/ml/v4/deployments/uaep_deployment/predictions?version=2022-11-02', json=payload_scoring,
    headers={"Authorization": 'bearer ' + accessToken})
